Scope

Applied Surface Science is concerned with applied physics and chemistry of surfaces and interfaces and with the atomistic description of processing, modification and characterization of surfaces, interfaces and thin films. These include growth and epitaxy, oxidation, reactivity as well as surface modification by directed energy deposition (lasers, ions or electron beams) or other techniques (i.e. plasma etching). Important areas in the field are electronic materials (i.e. semiconductors, organic films, ceramics) and chemical processes at surfaces (catalysis, corrosion, reactivity).

Abstracted/indexed in:

Aluminium Industry Abstracts; Chemical Abstracts; Current Contents: Engineering, Computing and Technology; Current Contents: Physical, Chemical and Earth Sciences; EI Compendex Plus; Engineered Materials Abstracts; Engineering Index; INSPEC; Metals Abstracts.

- **NACE approval**
- **6000 documents, 2000 images, 600 formatted tables**
- **Easy-to-use search facilities**
- **Possible to add your own annotations**
- **Operates on LAN, thus allowing multi-user access**
- **Price comparable to purchase of printed products separately**
- **Windows® '95 compatible**
- **Enhanced software features**
- **Further updates will ensure continuity.**

This update supercedes all previous updates, and converts the original Active Library® on Corrosion software as provided on the ALC 1.0 (first edition, 1992) CD-ROM to a new version, ALC 1.3. The changes implemented refer to the operating software only. The content (corrosion-specific information) has not been changed from ALC 1.0 to ALC 1.3.

Technical Improvements

1) ALC 1.3 CD-ROM now operates under all Windows® 3.1 and higher operating systems (up to and including Windows® '95).

2) COR-SUR and COR-SUR2 databases have been reprogrammed to allow Windows® '95 compatibility. Now possible to open both databases at the same time.

3) On larger screens with SVGA resolution (800x600) ALC 1.3 now appears as a true Microsoft® Windows® application with title bar. Each window can be moved to another position.

4) Free-text searching has been speeded up.

5) This update ensures trouble-free installation of multiple Active Library installations on the same system (e.g. Elsevier Science Catalogue).

Catalysis by Metals and Alloys

By **V. Ponec** and **G.C. Bond**

Studies in Surface Science and Catalysis, Volume 95

The theoretical basis of chemisorption and catalysis by metals and alloys, and their use in a range of model and industrially significant catalysed processes are described in this book.

Model, as well as industrially used reactions catalyzed by alloys are reviewed, among them the Fischer-Tropsch synthesis, reactions of alkanes ('reforming'-reactions), oxidations, hydro-/dehydrogenation, decomposition of methanoic acid, deuterium exchange reactions (H_2, hydrocarbons) and to a lesser extent some others. This review on catalytic reactions, with results from the available information, is introduced in two chapters which summarize the definition, the physical meaning and the role of such factors as ligand (electronic structure), ensemble size (geometrical) and ensemble composition effects. The assessment of the roles of these individual factors requires the knowledge of several physical techniques and a proper evaluation of the results obtained by them. An introduction to this field of physics forms the content of the introductory chapters of this book.

A long period (1968-1994) of intensive research into catalysis by alloys has just been concluded so that reliable conclusions can be drawn concerning the roles of ligand, geometric and compositional effects. Particular attention is paid to the connection between chemisorption and catalytic phenomena, and their dependence on the structure of the surface as revealed by current techniques of solid-state physics is highlighted.

Scientists in related fields, such as electrochemistry, solid state chemistry, materials science, corrosion, tribology and other fields of applied surface science, organic synthesis and general inorganic chemistry should find the information contained in this book of interest in their work.

Submission of papers

Manuscripts (1 original and 2 copies + ELECTRONIC FILE), should be sent to one of the following editors

Professor L.C. Feldman
Professor Jun-ichi Nishizawa
Professor W.F. van der Weg

For editorial addresses, see inside front cover

Original material. Submission of a manuscript implies it is not being simultaneously considered for publication elsewhere and that the authors have obtained the necessary authority for publication.

Refereeing. Authors are encouraged to list the names (addresses and telephone numbers) of 3 to 4 individuals who are qualified to serve as referees for their paper. The referees selected will not necessarily be from the list suggested by the author.

Types of contributions

Original research papers and letters to the editor are welcome. Both should contain an Abstract (of up to 200 words) and a Conclusions section.

Letters to the Editor shoud be no longer than 6 double-spaced typed pages. They will be given priority in both the refereeing and production processes. To facilitate rapid publication of letters, proofs are not sent to authors prior to publication.

Manuscript preparation

All manuscripts should be written in good English. Authors whose first language is not English are urged to seek assistance in style, syntax and grammar. The paper copies of the text should be prepared with double line spacing and wide margins, on numbered sheets.

Structure. Please adhere to the following order of presentation: Article title, Author(s), Affiliation(s), Abstract, PACS codes and keywords, Main text, Acknowledgements, Appendices, References, Figure captions, Tables.

Corresponding author. The name, complete postal address, telephone and fax numbers and the E-mail address of the corresponding author should be given on the first page of the manuscript.

Classification codes/keywords. Please supply 1–4 classification codes (PACS and/or MSC) and 1–6 keywords of your own choice that describe the content of your article in more detail.

References. References to other work should be consecutively numbered in the text using square brackets and listed by number in the Reference list. Please refer to a recent issue of the journal or to the more detailed instructions for examples.

Vectors. Vectors should be indicated by a wavy underlining in the manuscript, and will be printed in bold-face italics. If necessary, unusual symbols should be explaned in pencil in the margin.

Illustrations

Illustrations should also be submitted in triplicate: 1 master set and 2 sets of copies. *Micrographs must always be submitted as originals in triplicate* for refereeing purposes. The line drawings in the master set should be **original** laser printer or plotter output or drawn in black india ink, with careful lettering, large enough (3–5 mm) to remain legible after reduction for printing. The photographs should be **originals**, with somewhat more contrast than is required in the printed version. They should be unmounted unless part of a composite figure. Any scale markers should be inserted on the photograph itself, not drawn below it.

Colour plates. Figures may be published in colour, if this is judged essential by the editor. The publisher and the author will each bear part of the extra costs involved. Further information is available from the publisher.

After acceptance

Important. When page proofs are made and sent out to authors, this is in order to check that no undetected errors have arisen in the typesetting (or file conversion) process. No changes in, or additions to, the edited manuscript will be accepted.

Copyright transfer. In the course of the production process you will be asked to transfer the copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Electronic manuscripts

The publisher welcomes the receipt of an electronic version of your accepted manuscript. If there is not already a copy of this (on diskette) with the journal editor at the time the manuscript is being refereed, you will be asked to send a file with the text of the accepted manuscript directly to the publisher by E-mail or on diskette (allowed formats 3.5" or 5.25" MS-DOS, or 3.5" Macintosh) to the address given below. Please note that no deviations from the version accepted by the editor of the journal are permissible without the prior and explicit approval by the editor. Such changes should be clearly indicated on an accompanying printout of the file.
